

254 μ m

A photomicrograph showing a tissue sample under a microscope. The sample consists of a dense arrangement of cells and extracellular matrix. A prominent feature is a large, irregularly shaped area in the center-right portion of the field, which appears darker and more granular than the surrounding tissue. This central area is likely a region of cellular degeneration or necrosis. The overall texture is somewhat mottled, with variations in color from light grey to dark brown. A scale bar is located in the bottom right corner, indicating a length of 254 micrometers.
